

Final Project

Due December 21st, 11:00, online submission only

1. Recall Boz, Gopinath, and Plagborg-Møller (2017) (older working paper version, available on my.nes). You can download their data from [here](#).
 - (a) Replicate Figure 2 from the paper (price pass-through as a function of invoicing share). To do that you need to reproduce some of the results from Table 1.
 - (b) Try to use the same data to run pass-through regressions similar to regression (26) from Casas, Diez, Gopinath, and Gourinchas (2017) (older working paper version, available on my.nes). Do it (separately) for three countries: Switzerland, Turkey, and Argentina. Plot pass-through coefficients for these countries similarly to Figure 2 and explain the differences between this Figure and Figure 2.

You can complete this assignment in groups of up to three students. Make sure to attach all of your derivations and codes. Your grade will depend on how easy it is to read your files.
